

Open Science as the New Normal of Research?

Introductory webinar ♦ Open for you! training program

Monday 10th of February 2025, 9:00-12:30 AM

9:00 ♦ INTRODUCTION

Sébastien Perrin (Sorbonne University, France)

9:15 ♦ PRE-REGISTRATION

Tony Ross-Hellauer (Know Center Research, Austria)

Pre-registration is the practice of documenting a study's research plan, hypotheses, and analysis methods before data collection begins to increase transparency and reduce bias.

9:45 ♦ DATA MANAGEMENT

Sebastian Zangerle and Georg Schwesinger (Heidelberg University, Germany)

FAIR research data management not only serves to facilitate personal research, but is also essential to promote the reliability, reproducibility and efficiency of research as a whole. Transparent and open data enable the reusability of research results and are therefore a central element of open science.

10:15 ♦ PREPRINTS

Paola Galimberti (University of Milan, Italy)

Preprints are research manuscripts that have not yet undergone formal peer review. They remain a popular means of disseminating scientific results and provide an opportunity to explore new ways of carrying out peer review and publishing.

10:45 ♦ BREAK

11:00 ♦ PEER REVIEW

Pascale Pauplin (Sorbonne University, France)

Peer review is a key step of academic publishing. Open science provides new ways to enhance transparency and increase participation of the academic community in the peer review process.

11:30 ♦ OPEN ACCESS

Žaneta Procházková (Charles University, Czech Republic)

Open access to academic papers has been transforming scholarly communication for the last 30 years.

12:00 ♦ WHERE TO PUBLISH

Rasmus Rindom Riise (University of Copenhagen, Denmark)

We would like to conclude the webinar by offering some advice on publishing in accordance with open access practices and requirements of funders.
