#### Project Title

Multilingual Epidemic Surveillance

#### Project Description

Being able to exploit efficiently texts in various languages is a crucial aspect of Natural Language Processing nowadays.

In an interconnected world where borders are increasingly porous, the importance of multilingual epidemic surveillance cannot be overstated. The ability to monitor and understand health trends across diverse linguistic communities is a critical component of global health security.

#### Keywords

natural language processing, LLM, Multilinguality

#### Description of the Host Research Lab

STIH is Sorbonne University's reference unit for linguistic sciences centered on the French language, from its Latin origins to the present day, with intersections in the fields of foreign languages, literature and computer science.

Theoretical and epistemological reflection of a more general scope is also carried out.
